PROFESSIONAL SUMMARY

Motivated Computer Science student with hands-on experience building AI-driven and full-stack products for real-world use cases. Strong in architecting scalable systems, automating complex workflows, and delivering reliable, well-structured engineering work in close collaboration with mentors and teammates. Seeking software roles where I can keep growing, learn from strong engineers, and contribute to solutions that drive measurable value.

EDUCATION

Singapore Management University (SMU) – *Bachelor of Science in Computer Science* **Aug 2023 – May 2027**

- Concentrations: Software Development, Data Analysis, Machine Learning, Cybersecurity
- Relevant Coursework: Data Structures and Algorithms, Statistical Thinking for Data Science, Operating Systems, Software Product Management

University of Victoria (UVIC) – *Exchange Program* **Sep 2025 – Dec 2025**

- Concentrations: Software Engineering, AI, Requirements Engineering, Frontend Development, Backend Development

PROFESSIONAL EXPERIENCE

Ensign InfoSecurity – *Full Stack Developer Intern* **Mar 2025 – Aug 2025**

- Architected and shipped an insider-threat web app (Next.js/NestJS/PostgreSQL), reducing investigation time 40%.
- Secured and productionized the system with RBAC and Dockerized deployments, achieving 100% environment consistency across dev/prod.
- Automated ingestion + processing for 1,000+ CSV/Parquet entries at 99.9%+ accuracy, eliminating hours of weekly manual work.

INSPIRE Program (UVIC) – *Full Stack Developer Co-op* **Sep 2025 – Dec 2025**

- [Action Hub](#)
- Built an AI meeting intelligence platform (notetakers, transcription, summaries/action items) with 100ms SSE/WebSocket updates and 99.9% sync across Meet/Zoom/Teams.
- Architected a context-aware AI email assistant grounded in transcripts, CRM data, and uploads, powered by 8+ tools (search, thread analysis, contact lookup).
- Developed an MCP server + workflow system that auto-injects context into LLM pipelines, supports multi-tenant usage, scales on AWS, and triggers Customer.io notifications.

CORE PROJECTS

ThreadRoom – *Full-Stack E-Commerce Platform with AI Shopping Assistant* | *Next.js, React, PostgreSQL, OpenAI*

- Architected a real-time e-commerce platform with AI-powered shopping assistant enabling natural language product discovery and personalized outfit recommendations.
- Engineered secure backend with Row-Level Security (RLS) policies, automated data import pipeline handling 500+ rows with duplicate detection, and OWASP-compliant security preventing Open Redirect and SSRF vulnerabilities.
- Built admin dashboard with protected routes, product CRUD operations, multi-image gallery support, and real-time customer messaging system with WebSocket subscriptions.

SmartMail – *Email Assistant with Contextual Intelligence (MCP Server)* | *MCP, REST APIs*

- Built an email copilot that drafts follow-ups grounded in meeting transcripts + CRM context.
- Designed a multi-tenant embeddings + retrieval service for per-user semantic search over enterprise data.
- Integrated internal tools via REST APIs for seamless context access and automation.

VOLUNTARY EXPERIENCE

Friends2Gather Community Service – *Mentor* **Jan 2024 – Dec 2024**

- Mentored children from underprivileged backgrounds, tracking progress through weekly feedback sessions.

AWARDS & RECOGNITION

MOE Edusave Good Progress Award – 2020

SPF Commander's Award – Project Team Award – Q4-2021, Q2-2022, Q4-2022, Q1-2023

TECHNICAL SKILLS & INTERESTS

Languages: Java, TypeScript/JavaScript, React, React-Native, Node.JS, Next.JS, Python, C, Assembly, SQL

Tools & Technologies: PostgreSQL, MySQL, Git, JIRA, Postman, REST APIs, Supabase, Docker, MongoDB

Methodologies: Agile, Waterfall, SDLC, Object-Oriented Programming
